THERE ARE TWO KINDS OF TOOLHOLDERS:

- The VDI- shank is completely drilled. The tool can be positioned through the shank without having to cut it, in case it is too long for machining.
- The VDI- shank is not drilled and has only one adjusting screw at the end of the hole where the tool is placed.

TECHNICAL FEATURES

1. Particularly suitable for vibration-damping- boring bars with HM-shank.
2. The particular elastic gripping allows a uniform tool-clamping and reduces vibrations when the tool is working with big projections.
3. Fixing occurs by two screws. A third screw, which is perpendicular to the tool, positions the tool itself, resting on the face, on the boring bar shank.
4. For completely cylindrical tools there is a reference mark

engraved on the front side of the toolholder.
It is useful to position the tool.

5. There are two kinds of toolholders:
 - a) The VDI- shank is completely drilled. The tool can be positioned through the shank without having to cut it, in case it is too long for machining.
 - b) The VDI- shank is not drilled and has only one adjusting screw at the end of the hole where the tool is placed.

OPERATING MANUAL FOR BAR PULLER

1. The self-centering chuck stops.
2. Set-up the jaws 3-5mm less than the measure of the bar diameter
3. The self-centering chuck opens
4. The bar puller pulls the bar because the jaws are normally closed by an internal spring.
5. The self-centering chuck closes
6. The bar puller slides out of the previously locked diameter
